

Activity 13: Global Tech Ambassador & Open-Source Pathway

Name: Manthan Manjunath Prabhu

GitHub: Manthan080507

Course: 3rd Semester B.Tech (Computer Science & Engineering)

Part A — Program Analysis & Target Selection

Selected Programs

1. GitHub Campus Experts

Eligibility

- Active GitHub user for more than 6 months.
- More than 1 year remaining before graduation.
- Student enrolled in a higher-education institution.
- Community leadership pathway.

Application Cycle / Deadline

The activity handout lists the program as biannual, with the next cycle approximately February 2027.

Benefits

- Public speaking and leadership training.
- Event funding.
- Opportunities to build and support technical communities.

2. GirlScript Summer of Code (GSSoC)

Eligibility

- Beginner-friendly program.
- Open to participants without an age or geographic barrier according to the handout.
- Focuses on Git/GitHub skills and beginner open-source contributions.

Application Cycle / Deadline

The activity handout lists an annual cycle, opening around late March.

Benefits

- Git/GitHub experience.
- Beginner-friendly open-source contribution opportunities.
- Practical experience contributing to open-source projects.

Comparative Matrix

Criteria	GitHub Campus Experts	GirlScript Summer of Code
Main Focus	Technical community leadership	Open-source contributions
Eligibility	Active GitHub user, student, >1 year before graduation	Beginner-friendly; open to participants
Application Cycle	Biannual; next cycle approximately February 2027	Annual; opens around late March
Main Skills	GitHub, leadership, public speaking, community building	Git, GitHub, open-source contribution
Main Benefits	Leadership training, public speaking, event funding	Git/GitHub experience and open-source contributions
Relevance to My Profile	GitHub portfolio, project development and community growth	GitHub practice, programming and open-source development

Activity 13 — Page 2

Part B — Readiness Assessment & Gap Analysis

1. GitHub Campus Experts

Current Strengths

- I maintain a public GitHub profile with 6 public repositories.
- I have created and maintained repositories for programming practice and projects.
- I have a public SIH2026 Python project repository.
- I maintain a HackerRank 3rd Semester portfolio repository.
- I have created and published a personal portfolio using GitHub Pages.
- I have experience with C, Python and HTML-based projects.

Gaps to Improve

- I have limited experience organizing technical events or student communities.
- I need to improve public speaking and presentation skills.
- I need more involvement in developer communities.
- I should improve technical writing and project documentation.

2. GirlScript Summer of Code

Current Strengths

- I practice programming through coding and portfolio repositories.
- I have experience using Git and GitHub.
- I have created repositories and pushed projects to GitHub.
- I have experience with C and Python and have built a web portfolio using HTML.
- I have started building a public technical portfolio.

Gaps to Improve

- I have limited experience contributing to external open-source projects.
- I need more practice creating pull requests.
- I need experience participating in code reviews.
- I should become more comfortable understanding unfamiliar codebases.

4-Week Preparation Plan

Week	Planned Actions
Week 1	Organize my GitHub profile, improve repository README files, and identify beginner-friendly open-source projects.
Week 2	Make a small open-source contribution and practice branches, commits and pull requests.
Week 3	Make additional contributions, practice code review, and write short technical notes about what I learned.
Week 4	Improve my resume and GitHub portfolio, document my contributions, practice a short technical introduction, and review application requirements.

Expected Outcome

By the end of four weeks, I aim to have a more organized GitHub profile, initial open-source contributions, improved technical writing, and better preparation for student technology community programs.

Part C — Technical Community Motivation Essay

I am a 3rd Semester B.Tech Computer Science Engineering student interested in software development, programming, and open-source technologies. I have been building my technical foundation through practical work involving C, Python, Git, GitHub, coding practice, and web development. My public GitHub profile currently contains programming repositories, an SIH2026 project, a HackerRank portfolio, and a GitHub Pages portfolio website. These experiences have helped me develop problem-solving skills and understand the importance of consistent practice and collaboration.

I am interested in programs such as GitHub Campus Experts and GirlScript Summer of Code because they would allow me to move beyond individual coding practice and become more involved in the wider developer community. I want to improve my ability to collaborate with other developers, contribute to open-source projects, communicate technical ideas, and learn from experienced contributors.

My GitHub portfolio shows that I have started building a public record of my technical learning. However, I recognize that I need more experience with external open-source contributions, pull requests, code reviews, technical writing, and community participation.

Over the next few weeks, I plan to improve my GitHub profile, contribute to beginner-friendly open-source projects, document what I learn, and develop my communication skills. I believe these experiences will help me become a more confident developer and prepare me for future opportunities in open-source development and technical communities. I also hope to share my learning with other students, support beginners, and develop the confidence needed to participate actively in technical communities. My long-term goal is to contribute consistently to open-source projects and grow as a collaborative software developer.
