GitLens — Supercharge Git in VS Code

Understand any line of code, keep every branch, worktree, and coding agent in view, and ship cleaner history — without leaving VS Code.

GitLens is an [open-source](#) extension built and maintained by GitKraken, and installed more than 51 million times.

Your repository moves faster than it used to. Coding agents open branches, worktrees pile up, and pull requests stack while you're still reading a diff. GitLens pulls all of it into one interactive view — history, working changes, branches, worktrees, and live agent activity together — then helps you review it, rebase it, and shape it into commits someone can actually read.
